- Swiss Army™ is the registered trademark of Victorinox AG and subsidiaries, and is used here with their kind permission
- Thanks to John Kalinich at Computer Sciences Corporation; this presentation is largely based on material he prepared

Agenda

- History
- Installing PDS
- Learning to Use PDS
- PDSE Support
- Member Groups
- Getting Started
- PDS Subcommands

Agenda

- Miscellaneous Commands
- Summary
- Finally...

History

- PDS was designed to manipulate partitioned data sets (PDS's)
- Originally written in 1972 at Fireman's Fund Insurance by Tom Springer
- From 1977 to 1990, Bruce Leland and Steve Smith made extensive modifications to PDS
- In 1997, John Kalinich contributed modifications to the PDS command for Year 2000

History

- In 2005, Greg Price and John Kalinich added PDSE support
- The PDS command code base has grown from 3,500 to over 50,000 lines of code
- John Kalinich currently supports PDS; send him an Email at jkalinic@csc.com with your comments, concerns, suggestions, enhancements, etc. for PDS

Installing PDS

- Download File 182 from http://www.cbttape.org to obtain the PDS to install PDS
- Binary FTP or upload to MVS bin file with attributes (DSORG=PS,LRECL=80).
- Issue TSO RECEIVE INDATASET(bin) and respond to prompts to create install PDS
- Review and follow instructions in the $$$$INST member.

Installing PDS

- Edit member #PDSGEN (and #PDSGENB if required) to set PDS global assembler variables according to instructions in each member
- An alternative to updating #PDSGEN is to uncomment the COPY statement for #PDSGENU (at the end of #PDSGEN) and make your changes in that user member (this is the current default)

Installing PDS

- Run job PDSJCLHL to assemble and link edit the PDS load module into a PDS load library
- Run job PDSPJCL to copy the ISPF panels and message members
- Copy member PDSHELP to a SYSHELP dataset. Rename it to PDS86 with aliases of PDS and PDSE

Installing PDS

- To install the PDS related command processors, issue RECEIVE INDS(install.pds(UTILXMIT)) and respond to prompts to create the following load modules in the PDS load library:

  BLKDISK, COMPARE*, DELINKI, DISASM, DSAT, DVOL, HEL, OFFLOAD, RELEASE, REVIEW and VTOC

- While not required, the above commands offer significant extended functions for PDS

Installing PDS

- Tailor PDS LIBDEF CLIST in PDSLIBDF member
- Add Option P to an ISPF selection panel:

```
)BODY
P   PDS Command - Invoke PDS

)PROC
P,'CMD(%PDSLIBDF) SCRNAME(PDS)'
```

- Can run as TSO command processor if placed in TSOLIB/STEPLIB/LINKLIST (e.g. TSO %PDS)

Learning to Use PDS

- Read “Effective use of the PDS command” (member $$$PROSE on the install PDS) by Bruce Leland
- Read “Public MVS Software - The PDS Program” by Sam Golob (members $PDSART1-3)
- Read the TSO Help member for PDS (member PDSHELP)
- This presentation (member $$S2837)

PDSE Support

- PDSE's have been difficult to support due to IBM's proprietary IGWFAMS interface
- In 2005, Greg Price and John Kalinich added PDSE support using standard access methods
- PDS uses QSAM to read PDSE directories and BPAM to read/write PDSE members
- Apply OA13747 to fix S0C4's in PDSE dataspace (thanks to Greg Price for this APAR)

PDSE Support

- Apply OA13224 to allow DISP=SHR for STOW INITIALIZE (thanks to John Kalinich for this APAR)
- STOW INITIALIZE will reset a PDS directory, but it requires exclusive access for a PDS
- PDSE provides its own serialization, so this APAR relaxes the exclusive requirement for PDSE datasets

PDSE Support

- The following subcommands are not supported for PDSE data sets:

Subcommand	PDSE Type	Reason
RESTORE	Data	IBM design
RESTORE	Program Object	IBM design
REPLACE	Program Object	IBM design
ALIAS	Program Object	Binder API
ATTRIB lkedattr	Program Object	Binder API
REPRO	Program Object	Binder API

Member Groups

- Many PDS commands allow lists or groups of members to be specified
- You can specify ranges of members, matching patterns, discrete member names, or any combination of the above

Member Groups

- ":" (colon) represents all members
- memlist :

```
- DSN=SYS2.PDS.INSTALL,VOL=SER=OS39M1   MEM=:   --------------------------------
CMD   NAME      DATA      VER.MOD     CREATED    LAST MODIFIED   SIZE   INIT     ID
      $$$$$$$$            01.00     97/11/24   97/11/24  7:38      6      6    TRIDJK
      $$$$READ
      $$$$REA1            ALIAS
      $$$BUGS             01.05     03/04/08   03/08/04 12:09    531    530    TRIDJK
      $$$CTBL             01.10     92/01/29   05/08/10  8:34    174    174    TRIDJK
      $$$CUSTM            01.40     98/03/16   05/12/28 10:45    384    336    TRIDJK
      $$$CUT              01.03     98/01/27   98/06/17  8:02    105    100    TRIDJK
```

Member Groups

- "*" (asterisk) represents the current sublist
- sublist a*;memlist *

```
- DSN=SYS2.PDS.INSTALL,VOL=SER=OS39M1  MEM=ABEHELP  --------------------------
CMD  NAME     DATA     VER.MOD    CREATED   LAST MODIFIED  SIZE  INIT    ID
     ABEHELP
```

Member Groups

- “mem1:mem2” defines a range starting with mem1, ending with names starting with mem2
- memlist @al:@cl reset

```
- DSN=SYS2.PDS.INSTALL,VOL=SER=OS39M1  MEM=@AL:@CL  --------------------------
CMD  NAME     DATA     VER.MOD    CREATED   LAST MODIFIED  SIZE  INIT    ID
     @ALIAS             01.19    99/07/16  06/01/03 15:20   169   158   TRIDJK
     @ATTRIB            01.79    98/01/15  06/01/04 13:58  1579  1413   TRIDJK
     @BROWSE            01.06    99/07/16  06/01/11  8:14   520   515   TRIDJK
     @CHANGE            01.00    99/07/16  99/07/16  9:34    35    35   TRIDJK
     @CLEAR             01.00    99/07/16  99/07/16  9:34    45    45   TRIDJK
```

Member Groups

- "mem1/mem2" defines a pattern where mem1 and mem2 are anywhere in the member name
- memlist @/pds reset

```
- DSN=SYS2.PDS.INSTALL,VOL=SER=OS39M1  MEM=@/PDS  ----------------------------
CMD  NAME     DATA     VER.MOD    CREATED   LAST MODIFIED  SIZE  INIT    ID
     @FIXPDS           01.34    99/07/16  06/02/22 14:14  1000   906   TRIDJK
     @PDSMAIN          01.99    98/10/13  06/02/22 14:32  5378  4869   TRIDJK
     @PDSMODS          01.99    02/12/18  06/02/22 14:22   212    35   TRIDJK
     PDS@PRIM          01.24    00/03/20  05/09/30  7:38   261   223   TRIDJK
```

Member Groups

- “mem1*mem2” defines a pattern where mem1 precedes mem2 in the member name
- memlist @*pds reset

```
- DSN=SYS2.PDS.INSTALL,VOL=SER=OS39M1  MEM=@*PDS  ----------------------------
CMD  NAME     DATA     VER.MOD    CREATED   LAST MODIFIED  SIZE  INIT    ID
     @FIXPDS           01.34    99/07/16  06/02/22 14:14  1000   906   TRIDJK
     @PDSMAIN          01.99    98/10/13  06/02/22 14:32  5378  4869   TRIDJK
     @PDSMODS          01.99    02/12/18  06/02/22 14:22   212    35   TRIDJK
```

Member Groups

- Combinations can also be specified
- memlist (a:b, tso/, pdshelp) reset

```
- DSN=SYS2.PDS.INSTALL,VOL=SER=OS39M1  MEM=(A:B  ------------------------------
CMD  NAME     DATA     VER.MOD    CREATED   LAST MODIFIED  SIZE  INIT    ID

```

Getting Started

- Execute the PDSLIBDF CLIST to start PDS

```
  RefList  RefMode  Options  Help
--------------------------------------------------------------------------------
                           PDS Version 8.6
Option ===>

    I - Enter ISPMODE
    M - Enter MEMLIST with the identified MEMBERS
    L - Enter Line mode
  SET - Set default options prompt
blank - Enter MEMLIST if any member data is entered; ISPMODE otherwise

ISPF Library:
   Project ===> TCONLEY
   Library ===> TSO
   Type    ===> JCL
   Members ===>                    (set to * or a member group to use MEMLIST)

Other Partitioned or Sequential Data Set or FILE(ddname):
   Data Set Name  ===> sys2.pds.install
   Volume Serial  ===>          (If not cataloged)
   Volume Set     ===>          (For a default volume name)
   MEMLIST Prompt ===> NO       (yes/no for a MEMLIST prompt panel)
   PDS PGM Name   ===> PDS86    (latest: PDS86)
```

Getting Started

- PDS log is displayed

```
 ------------------------------------------------- ISPMODE Session Display
 COMMAND ===>
Enter an ISPF command, a PDS subcommand or a special control code:
   LA Lista      1 Suspend ISPF     9 Swap panels    R Recall
   LV Listv      6 MEMLIST all      F Find in table  X Above/Below/All
   ML Memlist    7 Output log       O Options        * Memlist *
 - DSN=SYS2.PDS.INSTALL,VOL=SER=OS39M1  MEM=  --------------------------------
 PDS100I PDS86 -- VERSION 8.6.02  FEBRUARY 22, 2006

 PDS200I DISP UNIT OPT RECFM LRECL BLKSIZE   ALLOCTRK FREETRK SECONDARY FREEDIR
 PDS200I SHR  3390 C   FB       80   27920   5X   401     167    50 TRK      43

 PDS300A ENTER OPTION -- DSN=SYS2.PDS.INSTALL,VOL=SER=OS39M1  MEM=
```

Getting Started

- Enter “6” for MEMLIST all

```
 ------------------------- MEMLIST Source Member List 1 -- Row 1 to 16 of 1,011
 COMMAND ===>                                                  SCROLL ===> CSR
Enter an ISPF command, a PDS subcommand or a special control code:
   8 View log    1 Suspend ISPF    6 MEMLIST all    F Find      R Recall
  LA Lista       4 Sublist =       7 Output table   L Locate    SO Sort
  LV Listv       5 Check aliases   9 Swap panels    O Options   X Above/Below/Al
 - DSN=SYS2.PDS.INSTALL,VOL=SER=OS39M1  MEM=:  -------------------------------
 CMD  NAME      DATA     VER.MOD    CREATED   LAST MODIFIED  SIZE  INIT    ID
      $$$$$$$$           01.00    97/11/24  97/11/24  7:38     6     6   TRIDJK
      $$$$READ
      $$$$REA1           ALIAS
      $$$BUGS            01.05    03/04/08  03/08/04 12:09   531   530   TRIDJK
      . . .
```

PDS Subcommands - ATTRIB

- ATTRIB displays and modifies load module attributes or member statistics
- Attributes for load modules:

```
AMODE24/AMODE31/AMODE64/AMODEANY
AUTH/NOAUTH  or  APF/NOAPF
DC/NODC                        EDIT/NOEDIT
ENTRY(entryname)               EXEC/NOEXEC
LOADONLY/NOLOADONLY            PAGE/NOPAGE
REFR/NOREF                     RENT/NORENT
REUS/NOREUS                    RLDFIX/NORLDFIX
RMODE24/RMODEANY               SSI(hexdata)/NOSSI
UNALIAS                        NONE
ALIASINFO/NOALIASINFO          LKEDDATE/NOLKEDDATE
```

PDS Subcommands - ATTRIB

- Attributes for regular PDS members:

```
ADDSTATS      - create ISPF statistics if none are present
VER(num)      - reset the ISPF version number
MOD(num)      - reset the ISPF modification level
ID(userid)    - reset the ISPF userid
CREATED(mm/dd/yy) - reset the ISPF creation date
LAST(mm/dd/yy)    - reset the ISPF last modification date
TIME(hhmm)        - reset the ISPF last modification time
SECS(ss)          - reset the ISPF last modification time
UNALIAS       - remove any alias attribute
SSI(hexval)   - assign the hexadecimal SSI information
NOSSI         - remove any existing SSI information
NONE          - remove any existing SSI or ISPF attribute information
ALIASINFO     - provide alias name information
NOALIASINFO   - do not provide alias name information
```

PDS Subcommands - ATTRIB

- attrib pds86

```
- DSN=SYS2.PDS.LOAD,VOL=SER=OS39M2  MEM=PDS86  --------------------------------
>attrib pds86

PDS020I PDS86 ATTRIBUTES ARE: RENT, REUS, REFR
PDS024I PAGE ALIGNMENT IS REQUIRED
PDS102I ENTRY POINT AT 000000
PDS104I MODULE LENGTH  040C10  --    260K
PDS064I LAST LINK-EDITED ON  3/04/06  BY LKED 5695PMB01  V01 M03  AT  15:18:54
PDS160I ALIASES FOR THIS MEMBER ARE: PDS
```

PDS Subcommands - ATTRIB

- attrib pds86 norent noreus norefr

```
- DSN=SYS2.PDS.LOAD,VOL=SER=OS39M2  MEM=PDS86
>attrib pds86 norent

PDS020I PDS86 ATTRIBUTES ARE: NONE
PDS024I PAGE ALIGNMENT IS REQUIRED
PDS102I ENTRY POINT AT 000000

```

PDS Subcommands - RENAME

- RENAME will rename, swap, or replace members or groups of members in a PDS

```
--------------------------- O.REN    RENAME Subcommand -------------------------
OPTION  ===>

Enter the current member name, the new member name and any operands for RENAME:
===>

Operands:  currname - the current member name
           newname  - the new name for the member
           SWAP     - a member name exchange is to be performed
           GROUP    - members from currname:currname are to be renamed
           REPBY(z) - z names an existing member which is to become currname

Defaults:  none
```

PDS Subcommands - RENAME

- Rename tomold tomnew swap

```
- DSN=TCONLEY.TSO.JCL,VOL=SER=XS39M1  MEM=TOMNEW  ----------
>rename tomold tomnew swap
PDS090I TOMOLD HAS BEEN RENAMED TO TOMNEW
PDS090I TOMNEW HAS BEEN RENAMED TO TOMOLD
```

PDS Subcommands - REPLACE

- REPLACE finds and replaces strings in members

```
------------------------- O.REP    REPLACE Subcommand -------------------------
OPTION  ===>

Enter the member group name, search/replace strings and operands for REPLACE:
===>

Operands:  memgroup  (e.g., *; start:end; start:; first*pat; range*; part/)
                     -search-replace-   /  'search' 'replace'
                     NUM / SNUM / NONUM / LBLOCK / LDUMP / BLOCK / DUMP
                     WRITE/NOWRITE
                     CAPS/ASIS/IGNORE
                     STATS/NOSTATS
                     OFFSET(hex)       MODULE(Partname)
                     MAXIN(num)        MAXLEN(num)
                     MAXOUT(num)       MAXFIND(num)
                     SKIPCOL(num)      SKIPREC(num)

Defaults:  memgroup; NUM or previous REPLACE/FIND/LIST format;
           NOWRITE; CAPS; STATS
```

PDS Subcommands - REPLACE

- replace ady* /tom/new/ (write)

```
- DSN=TCONLEY.TSO.JCL,VOL=SER=XS39M1   MEM=ADY*   ------------------------
>replace ady* /tom/new/

** REPLACE   ADYSET00
002000 *    THIS IS EXECUTED AUNEWATICALLY DURING SYSTEM INITIALIZATION
PDS142I         15   LINES IN THIS MEMBER
>replace ady* /tom/new/ write

** REPLACE   ADYSET00
002000 *    THIS IS EXECUTED AUNEWATICALLY DURING SYSTEM INITIALIZATION
PDS142I         15   LINES IN THIS MEMBER
PDS145I          1 BLOCKS UPDATED
```

PDS Subcommands - REPRO

- REPRO can rebuild or add members to a PDS
- Repro iefbr14 to(iefbr15)

```
- DSN=TCONLEY.TSO.JCL,VOL=SER=XS39M1  MEM=IEFBR15  ---------------
>repro iefbr14 to(iefbr15)
PDS050I IEFBR14 WILL BE COPIED TO IEFBR15

PDS396A SHOULD REPRO CONTINUE (Y/N) ?
>y
PDS051I IEFBR15 IS BEING CREATED
```

PDS Subcommands - RESTORE

- RESTORE resurrects deleted members in PDS
- restore zmem repeat noprompt ttr(0)

```
- DSN=TCONLEY.TSO.JCL,VOL=SER=XS39M1  MEM=ZMEM:ZMEM  -------------------------
>restore zmem repeat noprompt ttr(0)

PDS091I ZMEM0001 HAS BEEN RESTORED
```

PDS Subcommands - RESTORE

- Options CAPS/ASIS (for FIND) and TEST to simulate RESTORE added with version 8.6.04

```
------------------------- O.RES    RESTORE Subcommand -------------------------
OPTION ===>

Enter the member name desired and any operands below for RESTORE:
===>

Operands:  member     - name to use for the restored member
           TTR(ttr)   - one to six hex digit ttr address or search start address
           REPEAT     - restore multiple members (mbr00001, mbr00002, ...)
           NOREPEAT   - restore only a single member
           DISPLAY    - display data from deleted members
           NODISPLAY  - display no data from deleted members
           PROMPT     - prompt before restoring a member
           NOPROMPT   - do not prompt before restoring a member
           COUNT(nm)  - number of lines to display from a member
           LIKE(xyz)  - take attributes from member XYZ
           FIND('s')  - a character string which must be found before a restore
           MODULE(n)  - a partial CSECT or entry name which must be present
           CAPS/ASIS  - case of the FIND argument
           TEST       - simulate the resurrection of deleted members

Defaults:  TTR(0), DISPLAY, PROMPT, COUNT(5), CAPS
```

PDS Subcommands - SRCHFOR

- SRCHFOR invokes SuperC to search the PDS

```
------------------------- O.SRCH    SRCHFOR Subcommand ------------------------
OPTION  ===>
Enter the member group name, the string and any operands for SCRHFOR:
===>

Operands:  memgroup      (e.g., *; start:end; start:; first*pat; range*; part/)
           'string'
           ALIAS/NOALIAS       - to include associated members
           HEX                 - string is hexadecimal
           PREFIX/SUFFIX/WORD  - type of search
           COL(start)          - start search in this column
           COL(start:end)      - limit search to these columns

Required:  memgroup, string
Defaults:  ALIAS

Process options:  ANYC, LONGLN (IBM SuperC Search-For)
```

PDS Subcommands - SRCHFOR

Miscellaneous Commands

- CAX - Display active catalogs (CAXWA)
- DISASM - Run a disassembler
- DLINK - De-link and breakdown a load module
- FSE - Full Screen Edit
- H - Online help (HEL command)
- LISTA - List TSO allocations
- LISTC/LISTF - List files w/DSAT or VTOC

Miscellaneous Commands

- LISTV - LSPACE list of volumes
- MXIBAT - MXI interface to PDS
- REV - REVIEW file browser

Summary

- Discussed the history of PDS
- Installing and learning to use PDS
- Talked about PDSE support
- Discussed member groups
- Showed how to get started
- Reviewed PDS subcommands
- Covered miscellaneous commands

Finally…

- I'm interested in hearing about your experiences with PDS; if you discover any unique ways to use PDS, please let me know about them
- Feel free to Email me at pinncons@rochester.rr.com if you have any questions or concerns regarding this presentation or PDS in general
